## **DETAILED ACTION**

### ***Status of the Claims***

1. Claims 10-14 and 16-23 are pending.

Applicants' amendment filed April 16, 2008 is acknowledged. Applicants' response has been fully considered. Claim 18 has been amended. Therefore, claims 10-14 and 16-23 are examined.

### **Withdrawn Claim Rejections - 35 USC § 112**

2. The previous rejection of claims 18-20 under 35 U.S.C. 112, first paragraph, new matter, is withdrawn in view of applicants' amendment to the claim, and applicants' response at pages 5-6 in the amendment filed April 16, 2008.

### ***Examiner's Amendment***

An **Examiner's Amendment** to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

### **Examiner's Amendments to the Specification:**

Please replace the paragraph added to the page 1 of the specification under the heading "RELATED APPLICATIONS" in the amendment filed October 19, 2005 with the following paragraph:

This application claims priority as a continuation application of Balu, United States Patent Application Serial Number 09/449,064, filed November 24, 1999, now U.S. Patent 6,703,480, titled the same, and the disclosure of which is herein incorporated by reference in its entirety, including drawings and sequence listing.

**The following is an Examiner's Statement of Reasons for Allowance:** The following reference is the closest art to the claimed invention. Wrighton *et al.* (U. S. Patent 5,773,569) teach a dimeric peptide analog of GGTYSCHFGPLTWVCKPQGG containing two disulfide bonds was prepared by providing a linking moiety (Knorr linker) with a first and second functional group capable of serving as initiation sites for peptide synthesis and a third functional group attachable to a solid support; binding the linking moiety to the solid support; synthesizing the first peptide and then the second peptide wherein each peptide contains two cysteines; cleaving the synthesized peptide from the solid support and purifying the peptide; and cyclizing the first peptide via forming the first disulfide bond, and subsequently forming the second disulfide bond via iodine oxidation to yield the bicyclic dimer (column 18, lines 25-40; Fig. 12). However, the reference does not teach oxidizing the peptide chains in a single oxidation step in a manner effective to preferentially promote the formation of intrapeptide disulfide bond relative to interpeptide disulfide bond formation, wherein at least 50% of the peptide dimer comprises a peptide chain having an intrapeptide disulfide bond. Balu (U.S. Patent 6,703,480) claims a method for synthesizing a peptide dimer by synthesizing simultaneously a first and second peptide chains linked to a linking moiety L<sub>K</sub> which is attached to a solid support, where the first and the second peptide chains each contains two cysteine residues to allow intramolecular cyclization; cleaving the peptide chains from the solid support; and oxidizing the peptide chains with an oxidizing composition effective to promote formation of intrapeptide disulfide bond while minimizing formation of intermolecular disulfide bond, wherein at least 50% of the peptide dimer comprises a peptide chain having an intrapeptide disulfide bond. An obviousness type double patenting rejection was made in the instant application over the 6,703,480 patent, and a terminal disclaimer was filed. Therefore, the claims are allowable over the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
